# AI Director — Architecture Design

12 October 2026 · Miguel Werneck · Follows `docs/ai-director-research.md` and `docs/ai-director-requirements-and-advice.md` · Source of this PDF: `docs/ai-director-design.html`

**In short:** six AI agents follow a fixed recipe written in code. Some steps run at the same time. Mistakes go back to whoever made them. Nothing is paid for until I approve. The result is **one** Seedance video.

---

## 1. What this document is

The research said what a good AI ad needs. The advice said what to build. This shows **how it fits together**.

The ad is **one** Seedance 2.5 video with several shots inside, at a length I choose (4–30 s). The character goes in as text. The product and location go in as pictures.

### The crew

Three new agents, three reused agents, two generators, and code.

**1 · Interrogator**
new agent
Fills in what the brief left out. Asks me only what I must decide.

**2 · Director**
new agent
Writes the plan: style, assets, shots. Uses the Higgsfield skill.

**3 · Cinematographer**
new agent
Camera and light for every shot, in one call, so each shot follows the last.

**4 · Describer**
reused agent
Describes the avatar sheet in words.

**5 · Evaluator**
reused agent
Scores that description.

**6 · Repairer**
reused agent
Fixes only the failing words.

**7 · Nano Banana Pro**
image generator
Makes the avatar, product and location pictures.

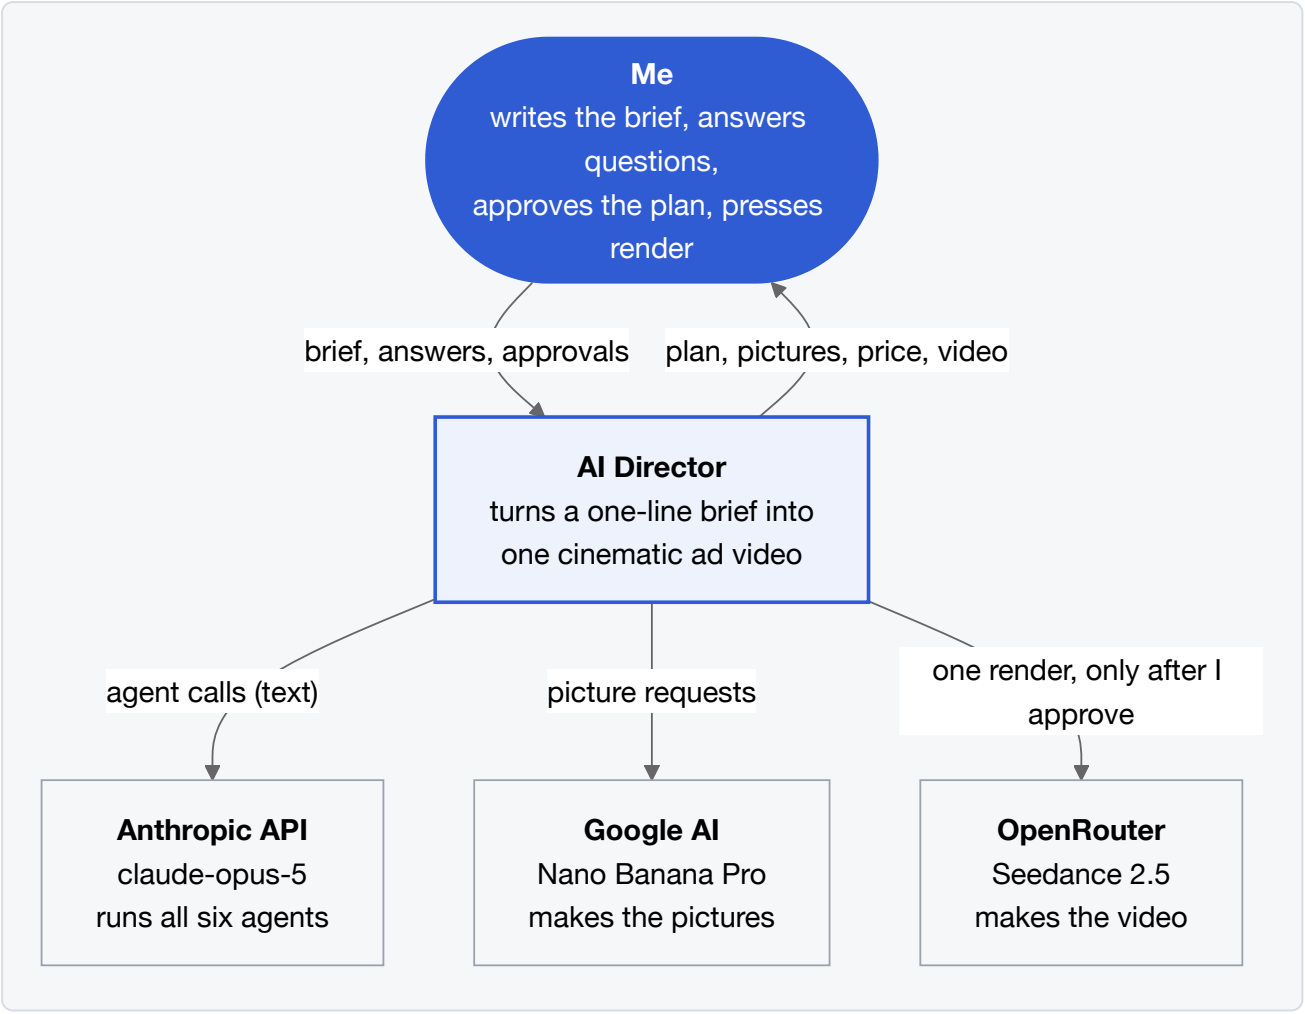

**8 · Seedance 2.5**
video generator
Makes the one video, with sound.

**+ Code**
not AI
Sets the order, builds and checks the prompt, shows the price.

---

## 2. The big picture — C4 level 1, system context

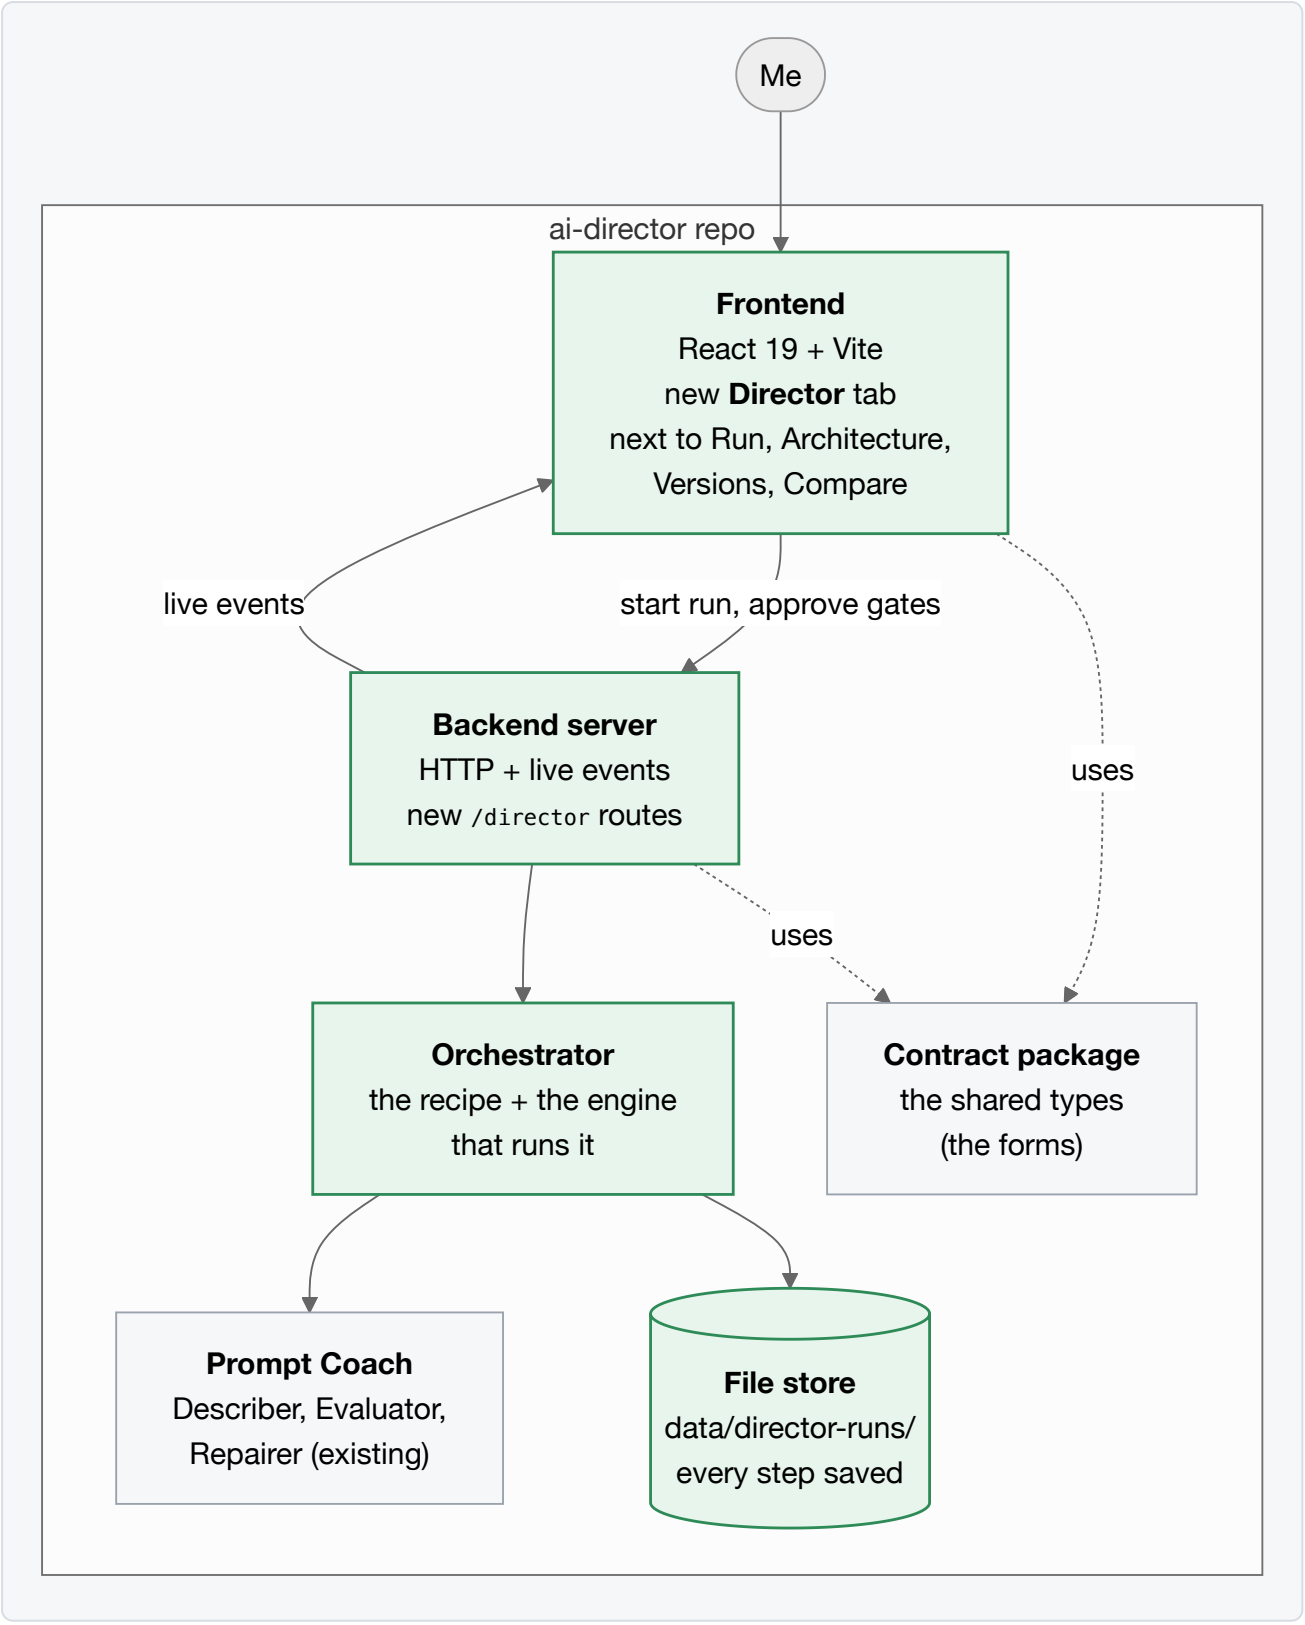

Who uses it, and what it talks to.

Only the render costs real money, and only after I approve.

## 3. The parts of the system — C4 level 2, containers

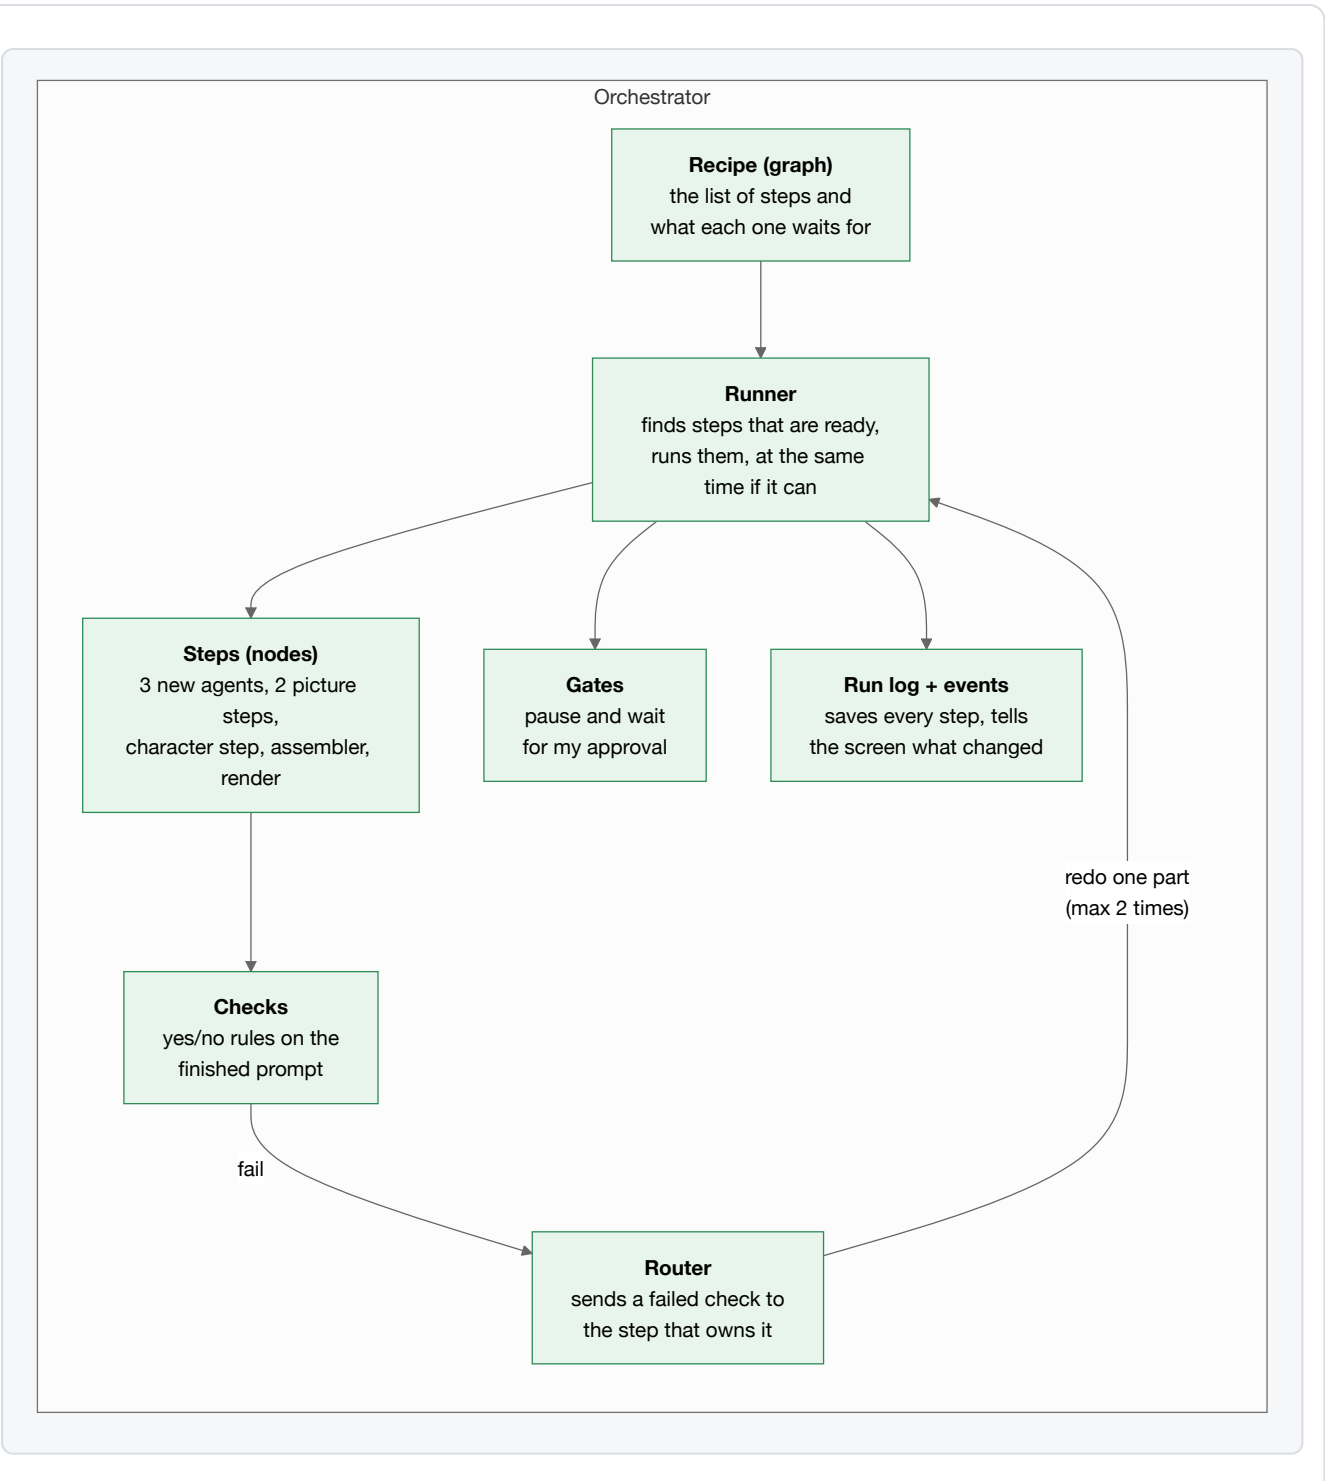

It is added to the Prompt Coach repo, not a new app.

Green = new. Grey = reused. The Prompt Coach becomes one part of the bigger workflow.

## 4. Inside the orchestrator — C4 level 3, components

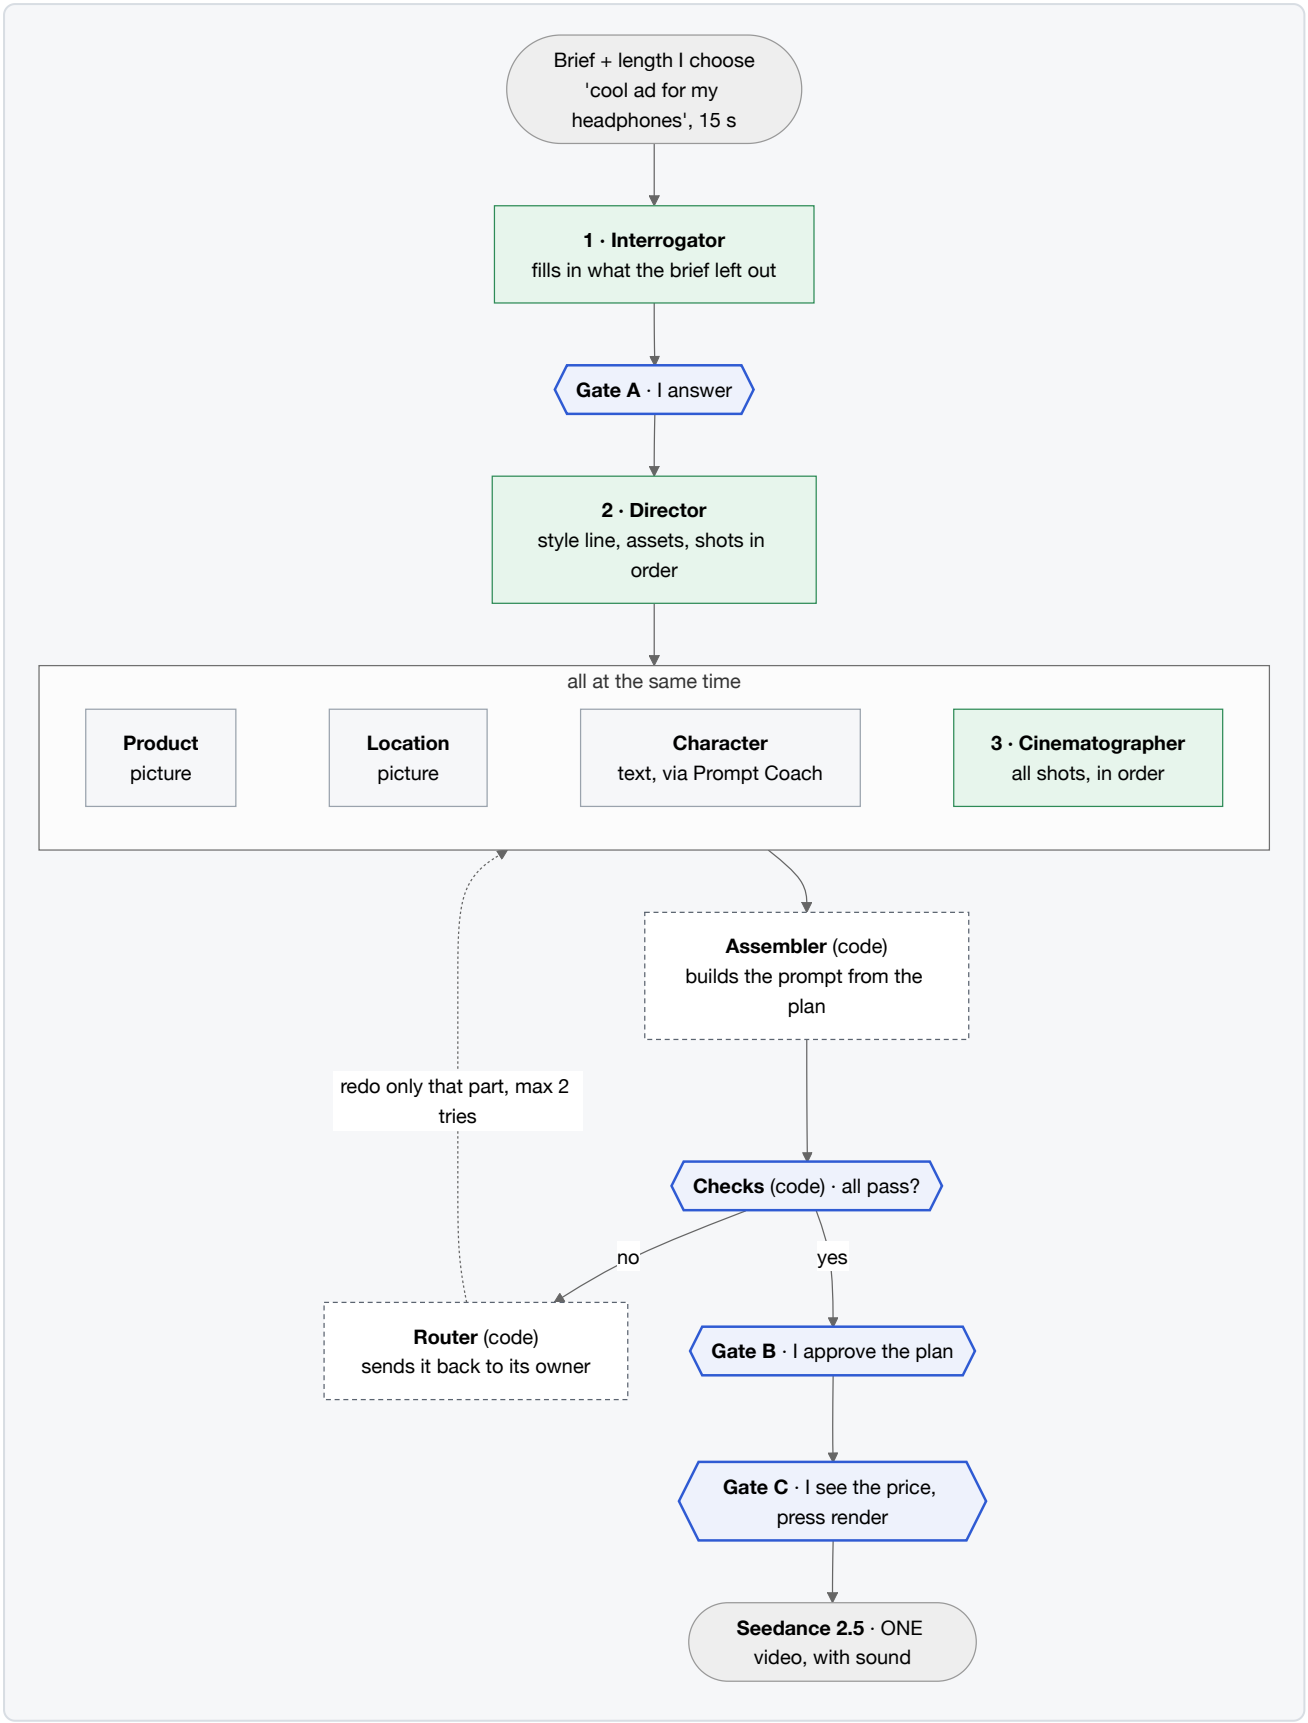

The new, hard part. Small pieces, one job each.

The runner is the engine. The recipe says what to do. The router says what to redo.

## 5. The workflow — every step, in order

Top to bottom. Boxes side by side run at the same time. Blue shapes are where I or the code decide.

Green = new agents. Grey = reused. Dashed = code. The parallel work is text and pictures only. Seedance is still called **once**.

## 6. The forms agents hand each other

Agents pass fixed forms, never loose text. The next agent cannot misread a form.

```
// packages/contract/src/director.ts
export type Plan = {
  styleLine: string;                      // pasted word for word into the prompt
  assets: { handle: string; kind: "product" | "location" | "character"; role: string }[];
  shots:  { n: number; action: string; weight: "short" | "normal" | "long" }[];
};
export type Camera = { shot: number; framing: string; lens: string; move: CameraMove;
light: string };
export type CameraMove = "static" | "slow push-in" | "pull-out" | "tracking" | "orbit" |
"crane up" | "handheld";
```

The camera `move` is one slot that only takes a value from a fixed list (from Higgsfield). Two moves cannot be written there, so code can check it without an AI.

## 7. Checks and routing — what happens when something is wrong

Code runs yes/no checks on the prompt. No AI judges. A failed check goes back only to the step that made that part, at most 2 times. The rest of the prompt never moves.

| Check | Example of a fail | Goes back to |
|---|---|---|
| Every approved shot is in the prompt | Plan has 4 shots, prompt has 3 | Director |
| Exactly one camera move per shot, from the list | "push-in while panning left" | Cinematographer (fixes that shot, keeps the others) |
| At most 5 reference pictures, each with a role | 6 pictures, or one nobody uses | Director |
| The shots fit the length I chose | 7 long shots in 10 seconds | Director |
| Style line and character text are identical everywhere | "short brown hair" vs "dark hair" | Assembler pastes it again |

## 8. End-to-end example: "cool ad for my headphones"

| Step | What it produces (shortened) |
|---|---|
| Brief | "cool ad for my headphones", 15 seconds |
| Interrogator | Asks me for the product photo. Decides the rest: apartment at dawn, calm tone. |
| Gate A | I upload the photo. |
| Director | Assets `@headphones`, `@apartment`, `@hero`. Four shots: noise wakes him · he grabs the headphones · noise drops · he walks out calm. |
| Product / Location / Character | Two pictures. The character text, cleaned by the Prompt Coach. |
| Cinematographer | Camera for all four shots, in order. Shot 2 says "push-in *and pan*". |
| Checks | Two moves in shot 2. Sent back. Returns as "slow push-in". All pass. |
| Gate B, Gate C | I approve, see ≈ $3.47, press render. |
| Seedance 2.5 | One 15-second video with sound. |

### The final prompt the Assembler builds

```
@Image1 is the headphones (@headphones). @Image2 is the apartment (@apartment).

Photoreal commercial, physical cine lens, 180° shutter motion blur, natural light with soft haze,
muted palette of slate grey, warm amber and off-white. Behaviour shown in the body, never stated.

HERO (@hero): a man in his late twenties, lean build, short dark-brown curly hair, light olive skin,
grey crewneck sweater, dark trousers.

Scene: the apartment from @Image2, window on the left, front door on the right.

Shot 1: Wide shot, 24mm, static. Hero lies awake as traffic noise pours through the open window;
he presses a pillow over one ear. <traffic rumble> <a distant siren>
Shot 2: Medium close-up, 50mm, slow push-in. He reaches to the bedside table and lifts the headphones from @Image1 over his ears in one smooth motion. <fabric rustle>
Shot 3: Close-up, 85mm, static, warm lamp from the right. The cups seal; his shoulders drop and his
eyes close for a beat. <the city noise falls to a low hum> (soft ambient synth)
Shot 4: Medium shot, 35mm, tracking. He walks out of the front door into bright morning sun, calm,
headphones on. (the synth rises gently)

Keep it subtitle-free, do not generate a logo or watermark.
```

Code pastes every piece from the approved plan. No model rewrites it. What I approved is what renders.

## 9. Build order

1. **Forms and runner,** tested with fake agents. Free.
2. **Interrogator and Director,** using the Higgsfield skill.
3. **Pictures and character,** reusing what exists.
4. **Cinematographer, Assembler, checks** and routing.
5. **Director tab.**
6. **Two briefs rendered,** and the write-up.

Made with Claude Code (Claude Opus 5.5) at my direction. Diagrams are written as text (Mermaid) inside `docs/ai-director-design.html`, so they can be edited there and the PDF re-exported.
